WARNING: the concept of Eigenvalues and Eigenvectors only applies to square matrices INTRODUCTION TO EIGENVALUES AND EIGENVECTORS

def: Let $A_{n\times n}$. an eigenvector \dot{e} is a non-zero vector s.t. $A \dot{e} = \lambda \dot{e}$ for $\lambda \in \mathbb{R}$ def: a scalar $\lambda \in \mathbb{R}$ is an eigenvalue of A, if \exists a nontrival sol. to $A \dot{e} = \lambda \dot{e}$

$$A_{n\times n}:\mathbb{R}^n\mapsto\mathbb{R}^n$$

$$\overrightarrow{e} \mapsto A \overrightarrow{e} = \lambda \overrightarrow{e}$$
, λ is a scalar s.t.

i.e., eigenvectors are scaled by their cooresponding eigenvalues THE GOAL IS TO REPLACE THE TRANSFORMATION MATRIX A WITH A CONSTANT λ

ex)
$$A = \begin{bmatrix} 1 & 2 \\ 0 & 3 \end{bmatrix}, \overrightarrow{e} = \begin{bmatrix} -1 \\ -1 \end{bmatrix}$$

$$\Rightarrow A \overrightarrow{e} = \begin{bmatrix} 1 & 2 \\ 0 & 3 \end{bmatrix} \begin{bmatrix} -1 \\ -1 \end{bmatrix} = -1 \begin{bmatrix} 1 \\ 0 \end{bmatrix} - \begin{bmatrix} 2 \\ 3 \end{bmatrix} = \begin{bmatrix} -3 \\ -3 \end{bmatrix} = 3 \begin{bmatrix} -1 \\ -1 \end{bmatrix}$$

$$A \vec{e} = \lambda \vec{e}$$
 same as $A \vec{e} = \lambda \vec{e} = \vec{0}$ same as $(A - \lambda I) \vec{e} = \vec{0}$

- λ is an eigenvalue iff $(A \lambda I)\vec{e} = \vec{o}$ has a nontrivial sol.
- the unique solution set solves $\operatorname{nul}(A-\lambda\, I)$ and is called the "eigenspace" of λ , denoted E_λ

•
$$\overrightarrow{Ae} = \lambda \overrightarrow{e}$$
 iff $det(\lambda In - A) = 0$ = λ is an eigenvalue of A iff $det(\lambda In - A) = 0$

$$NULL(A - \lambda I) = NULL(A - 2I)$$

(2) to find the null space of a matrix is to determine which of the rows go to zero; here we solve $(A-2I)\vec{e}=0$ to this end.

$$(A-2I) \overrightarrow{e} = 0 : \begin{bmatrix} 2 & -1 & 6 & 0 \\ 2 & -1 & 6 & 0 \\ 2 & -1 & 6 & 0 \end{bmatrix} \sim \begin{bmatrix} 2 & -1 & 6 & 0 \\ 0 & 0 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix} \sim \begin{bmatrix} 1 & -\frac{1}{2} & 3 & 0 \\ 0 & 0 & 0 & 0 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \frac{1}{2}x_2 - 3x_3$$

$$(A-2I) \overrightarrow{e} = 0 : \begin{bmatrix} 2 & -1 & 6 & 0 \\ 2 & -1 & 6 & 0 \end{bmatrix} \sim \begin{bmatrix} 2 & -1 & 6 & 0 \\ 0 & 0 & 0 & 0 \\ 0 & 0 & 0 & 0 \end{bmatrix} \sim \begin{bmatrix} 1 & -\frac{1}{2} & 3 & 0 \\ 0 & 0 & 0 & 0 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \frac{1}{2}x_2 - 3x_3$$

$$(A-2I) \overrightarrow{e} = 0 : \begin{bmatrix} 2 & -1 & 6 & 0 \\ 2 & -1 & 6 & 0 \end{bmatrix} \sim \begin{bmatrix} 2 & -1 & 6 & 0 \\ 0 & 0 & 0 & 0 \end{bmatrix} \sim \begin{bmatrix} 1 & -\frac{1}{2} & 3 & 0 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \frac{1}{2}x_2 - 3x_3$$

$$(A-2I) \overrightarrow{e} = 0 : \begin{bmatrix} 2 & -1 & 6 & 0 \\ 2 & -1 & 6 & 0 \end{bmatrix} \sim \begin{bmatrix} 2 & -1 & 6 & 0 \\ 0 & 0 & 0 \end{bmatrix} \sim \begin{bmatrix} 1 & -\frac{1}{2} & 3 & 0 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3 & 0 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1 = \begin{bmatrix} 1 & -\frac{1}{2} & 3x_3 \\ 0 & 0 & 0 & 0 \end{bmatrix} \Rightarrow x_1$$

$$\Rightarrow \overrightarrow{e} = \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = \begin{bmatrix} \frac{1}{2}x_2 - 3x_3 \\ x_2 \\ x_3 \end{bmatrix} = X_2 \begin{bmatrix} \frac{1}{2} \\ 1 \\ 0 \end{bmatrix} + X_3 \begin{bmatrix} -3 \\ 0 \\ 1 \end{bmatrix} \text{ is the } \underline{\text{full decomposition of our null space,}}$$

(3) at this point, we really just want to know the basis for our null space (called the "eigenbasis"):

$$B_{E_{\lambda}=2} = \left\{ \begin{bmatrix} \frac{1}{2} \\ 1 \\ 0 \end{bmatrix}, \begin{bmatrix} -3 \\ 0 \\ 1 \end{bmatrix} \right\} = \left\{ \begin{bmatrix} 1 \\ 2 \\ 0 \end{bmatrix}, \begin{bmatrix} -3 \\ 0 \\ 1 \end{bmatrix} \right\} \text{ is a plane in } \mathbb{R}^3$$

$$(called the "eigenspace"):$$

we're allowed to scale one, both, or neither vector to have a prittier representation; here I've simply multiplied the first vector by 2 in order to get rid of the fraction.

*note that the eigenbasis $B_{E_{\lambda=2}}$ is not unique *
